PROFESSIONAL SUMMARY

I am a self-motivated, tenacious, and ambitious young individual with a dedication towards managing and creating beautiful, interactive, and dynamic websites that engages user interaction. I enjoy working in a constantly changing environment in the tech industry and being part of thriving and developing teams. With my strong sense of maintaining a diligent and efficient work ethic and creating a productive and organized atmosphere, and with over a years experience in the software engineering industry, I am willing to offer my capabilities to a team searching for young talent.

National Certificate in Information Technology (System Development) : 02/2022
Umuzi Academny

Bachelor's Degree : 12/2018
School of Merit

WORK HISTORY

Junior Software Engineer - 2U, Cape Town

August 2022 - Current

2U is a platform company focused on delivering high quality education to learners across the globe. I have been the main engineer maintaining and enhancing many of the legacy systems our team owns, but mainly work with the applications responsible for providing a portal for students to gain information about a specific type of course that they are enrolled in.

My responsibilities also branch out to keeping in contact with key stakeholders about the portal application as well as keeping up to date and managing support desk queries that come through for bug reports and enhancement requests.

HOBBIES

Writing · Playing Piano · Learning About Computer Systems

Whenever I find the time, I mainly enjoy finding songs I can play on the piano as well as exploring different ideas to stories I've created and improving my creative thinking as I find the solutions I implement to problems could have been done better or with a different approach
