Jody Bailey

Full-Stack Software Engineer

+27 61 437 8557 | Cape Town, South Africa | jjeb2020@gmail.com

I am a self-motivated, tenacious, and ambitious young individual with a dedication to managing and creating beautiful, interactive, and dynamic websites that engage users. I enjoy working in a constantly evolving environment, with developers whom I can bounce ideas off and collaborate with, and being part of a thriving, engaging team that promotes individualism and growth.

With my strong commitment to a diligent, efficient, and independent work ethic, to creating a productive, organized atmosphere, and with 4 years of experience in the software engineering industry, I am eager to offer my capabilities to a team seeking fresh talent.

EDUCATION

Umuzi Academy

National Certificate: Information Technology Systems Development (NQF Level 5)

Feb 2022

SKILLS

HTML5

CSS + SCSS

JavaScript

Node.js

Docker

Ruby on Rails

React

Redux

GraphQL

Git + Github

MySQL/PostgreSQL

Express.js

Python

WORK EXPERIENCE

Software Engineer Intern, 2U **Aug 2022 — Oct 2022**

Joining 2U, an online education company, I had the opportunity to work with the placement team and their tech stack, supporting students enrolled in placement courses. The technologies allowed users to log time, view, edit, and create documents, receive automated emails sent during the time enrolled in their course, and view vital information regarding their placement.

Responsibilities: implementing bug fixes to our React.js application, improving the architecture of Ruby on Rails GraphQL applications, minor enhancement requests, pull request reviews, and test implementations.

Junior Software Engineer, 2U **Nov 2022 — August 2025**

As a result of being retained as a junior software engineer, my responsibilities vastly expanded to the point of me being the main engineer maintaining and enhancing many of the legacy systems my team owned. I played an integral role in all project initiatives our team underwent.

Responsibilities: Implement major enhancement efforts, addressing core application maintenance, collaborating in code mobbing sessions and feature implementations, refactoring legacy code, stakeholder management for support queries related to bugs, modifications in feature logic, and enhancements, and leading upgrades in core infrastructure.

Intermediate Software Engineer, 2U **Aug 2025 - Present**

Being promoted to an intermediate software engineer, my role within my team changed from being a member to being the team lead. I was the subject matter expert for all the systems within our team and led all engineering efforts and stakeholder communication.

Responsibilities: Establish and encourage coding best practices, lead maintenance, enhancements, and new feature initiatives, present solutions for stakeholder review, identify redundancy and areas for improved efficiency within our codebase, and lead 3rd party service migration efforts for services our applications interacted with.
