# JODY BAILEY

Software Developer

+27 61 437 8557
jjeb2020@gmail.com
Cape Town, South Africa

## EXECUTIVE SUMMARY

I am a self-motivated, tenacious, and ambitious professional dedicated to creating and managing beautiful, interactive, dynamic websites that engage users. I enjoy working in a constantly evolving environment, with developers whom I can bounce ideas off and collaborate with, and being part of a thriving, engaging team that promotes individualism and growth.

With a strong commitment to solving real-world problems with solutions that are both practical and scalable, the ability to create a productive, organized atmosphere, and 4 years of experience in the software engineering industry, I am eager to contribute to a team seeking fresh talent.

## WORK EXPERIENCE

**Software Engineer Intern, 2U** — **Aug 2022 - Oct 2022**

Implementing bug fixes to our React.js application, improving the architecture of Ruby on Rails GraphQL applications, minor enhancement requests, pull request reviews, and test implementations

**Junior Software Engineer, 2U** — **Nov 2022 - July 2025**

Implement major enhancement efforts, addressing core application maintenance, collaborating in code mobbing sessions and feature implementations, refactoring legacy code, stakeholder management for support queries related to bugs, modifications in feature logic, and enhancements, and leading upgrades in core infrastructure.

**Intermediate Software Engineer, 2U** — **Aug 2025 - Aug 2026**

Establish and encourage coding best practices, lead maintenance, enhancements, and new feature initiatives, present solutions for stakeholder review, identify redundancy and areas for improved efficiency within our codebase, and lead 3rd party service migration efforts for services our applications interacted with

## EDUCATION

**Umuzi Academy** — **Nov 2021 - July 2022**

National Certificate: Information Technology
Systems Development (NQF Level 5)

## TECHNICAL SKILLS

**Most Proficient**

HTML · CSS + SCSS · Javascript · React · Git + Github · MySQL/PostgreSQL · Node.js

**Competent Knowledge**

Redux · GraphQL · Docker · Typescript · Express.js · Python · Ruby on Rails · AWS Services · Buildkite · Copilot

**Learning**

Next.js · .NET · C# · Claude · Github Actions

## WORK ACHIEVEMENTS

**Data Migration + Pipeline Enhancements**

Successfully improved the strategy and speed of scheduled data migration workers that handled over 200000 records by ~80% and improved the implementation of statistics tracking of our frontend applications to bypass adblocker restrictions by moving the frontend implementation to a dedicated backend API route.

**Automated Communication Emails Strategy Overhaul**

Successfully reworked the automated email services along with migrating the email platform to Salesforce Marketing Cloud, allowing ~20 email campaigns to be sent to ~1000 students monthly. Additionally, built an AWS Lambda function to redirect email replies to the appropriate inbox, which required alignment with Salesforce Marketing Cloud for us to control and own all DNS records for our email domain.

**Working in Isolation**

Successfully led and managed the shrinking team of developers with all 9 applications within our team, eventually becoming the sole developer and subject matter expert for all applications. All security vulnerabilities, projects, system maintenance, enhancements, support desk queries, and documentation were managed by me

## PROJECTS

**Moods**

A mood tracking application. It allows users to create, update, and delete journal entries that specify how good a day each day was, list the emotions they felt, what they did, and what contributed most to their overall mood that day. More insightful data regarding the average mood score, mood score progression, and main positive and negative mood contributors can be found on the statistics dashboard

**Tech Stack**: React · Django · SQLite
**Repository**: https://github.com/JodyBailey/Moods

**Lo-Fi Playlist + Recommender**

A Lo-Fi playlist application written in Flask. It allows users to create their Lo-Fi playlists and discover Lo-Fi songs unique to them using YouTube's API.

**Tech Stack**: JavaScript · Python · SQLite
**Repository**: https://github.com/JodyBailey/Moods
